Education

Shri Govindram Seksaria Institute of Technology and Science,Indore — Indore, M.P
Bachelor of Technology in Electrical Engineering — *Aug. 2019 – May 2023*
CGPA: 7.44

Experience

System Engineer — June 2024 – Present
Tata Consultancy Services — *Mumbai, Maharashtra*

- Developed and maintained frontend functionality for banking applications using **JavaScript, HTML5, and CSS3**, supporting customer and teller-facing workflows.
- Handled **production Change Requests and incident resolution**, troubleshooting application issues and delivering fixes within defined SLAs.
- Collaborated in an **Agile development environment**, participating in requirement discussions, defect resolution, testing, and production support.

Projects

Event-Driven E-Commerce Platform | *React, Node.js, Express, RabbitMQ, PostgreSQL, MongoDB, Docker, Jest*

- Developed a Dockerized, microservices-based e-commerce platform with dedicated User, Product, Order, Payment, and Notification services, using PostgreSQL and MongoDB for service-specific persistence.
- Implemented asynchronous order processing using RabbitMQ and the Saga pattern, coordinating payment and stock reservation through domain events, with compensating actions for failed orders.
- Implemented the Transactional Outbox pattern in Order Service, atomically persisting orders and outbound events in PostgreSQL before asynchronous RabbitMQ publication. .
- Improved distributed workflow reliability through atomic idempotency claims, conditional stock reservation, retry handling, dead-letter queues, and RabbitMQ connection recovery.
- Strengthened application security with server-side product price verification, JWT-based role authorization, and order ownership validation.
- Built a React/Vite frontend with JWT authentication, user-scoped carts, asynchronous checkout status polling, order history, and persisted order-lifecycle tracking.

Resume Screening App | *Python, Streamlit, Scikit-learn, NLTK, NLP, TF-IDF*

- Developed a machine learning-powered resume classifier using TF-IDF and logistic regression to predict job categories from raw resume text (PDF, DOCX, TXT).
- Implemented intelligent text extraction, skill mining, fuzzy section detection (Experience, Education, Projects), and LSA-based summarization using NLP.
- Built a fully interactive Streamlit web app that displays predicted job domain, top keywords, extracted skills, section summaries, and a visual word cloud.

Technical Skills

Languages: Python, Java, C, SQL, JavaScript (ES6+), HTML5, CSS3
Frameworks:React.js, Node.js, Express.js, FastAPI
Developer Tools: VS Code, MATLAB, IntelliJ,LATEX,Git
DatabasesPostgreSQL, MongoDB,MySQL
Distributed Systems Tools: RabbitMQ, Docker, Docker Compose
Core Concepts:Data Structures and Algorithms, OOP, REST APIs, Microservices, Event-Driven Architecture, Saga Pattern, Transactional Outbox, Idempotent Messaging, JWT Authentication
